

3. Team up with 3 other students in the class and collate all of the results.

Random number generated	1	2	3	4	5	6	7	8	9	0 stands for 10
Frequency										

4. Now, collate the whole classes results.

Random number generated	1	2	3	4	5	6	7	8	9	0 stands for 10
Frequency										

Comment on the 4 sets of results.

**Results- comment examples:**

You will experience not all of the numbers 0~9 being selected, even have some double ups etc.

All numbers should have been generated at least once or twice.

The numbers 0~9 should start to have similar frequencies.

A rectangular shaped histogram (Bar graph) should be evident- as expected.

That's long run probability for you!
